The protein complexes in a simple unicellular organism--yeast--are similar to those in higher eukaryotes. The main reason is in the phylogenetic relationship of the analyzed organisms. However, the protein complexes in yeasts exhibit some peculiarities. It is often observed that the yeasts have fewer protein complexes than the higher eukaryotes. On the other hand, the proportions of complexes with different numbers of proteins vary in a wide range. It is characteristic that in most cases a single complex contains a larger number of proteins than in higher eukaryotes. The proportion of proteins of some complexes is higher in the yeasts than in the higher eukaryotes. It is assumed that there exist some important functions of some complexes in the processes of transcription, replication, and translation. A new characterization of the set of solutions of the two-dimensional convection-convection-diffusion equation in a convex domain. A new method to characterize the set of solutions of the two-dimensional convection-convection-diffusion equation in a convex domain is presented. The new method combines convex analysis and numerical methods to obtain the best approximation of the entire set of solutions of the equation in question. A comparison of the new method with the previous results obtained in the literature is also made. The new method is able to generate a large set of approximate solutions of the equation in question that are able to closely approximate all the actual solutions of the equation. The characterization of the set of solutions of the equation in question shows the structure of the set, which represents the dynamics of the process. The behavior of the set is obtained by the analytical and numerical methods, which provide a better understanding of the process. Part of Chicago City Council's proposed resolution that would have stated that its city flag is a symbol of the city's heritage and a source of pride. View Full Caption DNAinfo/Alisa Hauser CHICAGO — Mayor Rahm Emanuel is a boy, and he loves his hometown Chicago flag. So much so that the mayor has vowed to fight to keep the American flag's first six stars, which are emblazoned on the city's flag, and a second blue stripe that runs horizontally across the top 82157476af
